

Dual-Measure Scope Swap program

DM-100 Replace universal with new Dual-Measure scope (\$472)

This option applies **only** to the universal scope. The scope swap puts the new Dual-Measure scope in your current gauge, replacing the universal scope. This option does not apply to the old-style green-barrel scopes.

Scope Swap includes validation of the optics after installation against NIST-traceable gage blocks. If a Certificate of Calibration is desired (normally \$125), the price during a scope swap is \$85.

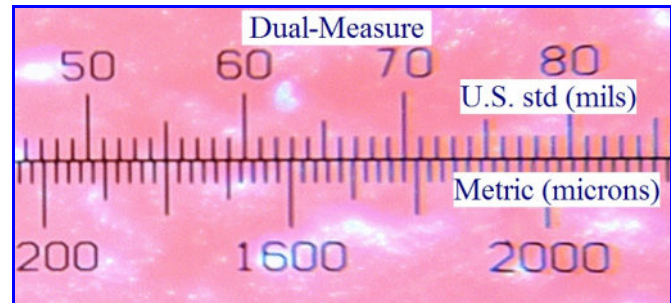

Reviews:

NACE instructor (April 2018) wrote: It looks awesome. Love the new optics and the really easy-to-read scales.

The Technical Sales head at a distributor wrote: The fact that you are going back to the original tip conversions is a big deal for us. It's a relief to be moving forward with:

- 10X: each div = 1/10 mil
- 2X: each div = 1/2 mil
- 1X: each div = 1 mil

Telling people to count divisions and divide by the tip number was easy and well-understood.

Oct 2019 Peter M., Product Quality Manager at a major industrial client:

The new reticles are AMAZING!

I have 2 more [gauges for scope swaps] in the mail to you and would like to purchase a new gauge as well. FYI, I plan to purchase one more new one after this and will also send another 2 for new scopes after I get these back, that should take care of us.

Thanks again, these are AWESOME!

I can add that I took the Tooke to the line and watching my inspectors use the new gauge was like watching my kids at Christmas.

New enhanced Dual-Measure reticle
